Get a real-time view of your digital estate

Internet-scale cybersecurity intelligence and a global network of monitoring points help you gain real-time visibility of your emails, domains, and internet-facing assets.

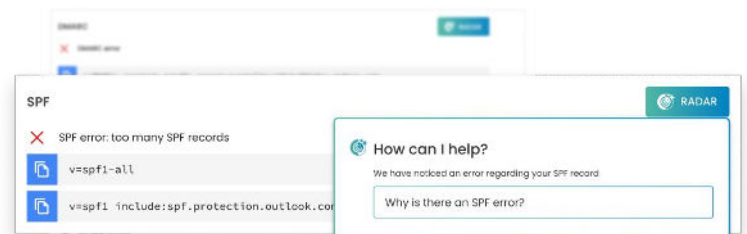

Understand and fix misconfigurations on the fly

Continuous assessment of your assets identifies and notifies you about misconfigurations you didn't know existed. Conversation-based fix guidance makes remediation a breeze.

DNS Security Posture: DMARC Evaluation

Here's the DMARC configuration for securelyparked.com

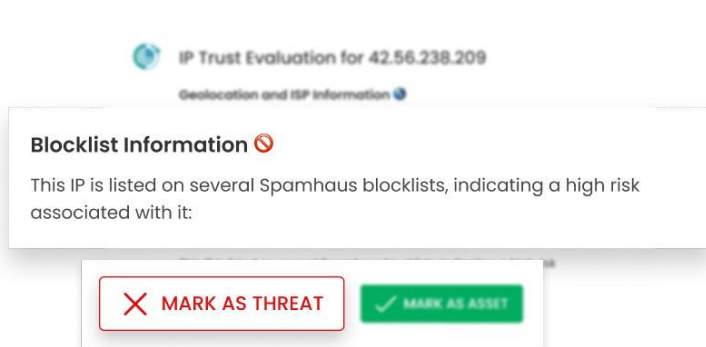

Policy Syntax Check	✓ Pass
DMARC policy	✓ Reject
Subdomain policy	✓ Reject

The screenshot shows a 'SPF' error notification: 'SPF error: too many SPF records'. Below the error, two SPF records are listed: 'v=spf1-all' and 'v=spf1 include:spf.protection.outlook.com'. A 'RADAR' button is visible in the top right corner. A 'How can I help?' dialog box is open, displaying the message: 'We have noticed an error regarding your SPF record' and a text input field with the placeholder text 'Why is there an SPF error?'.

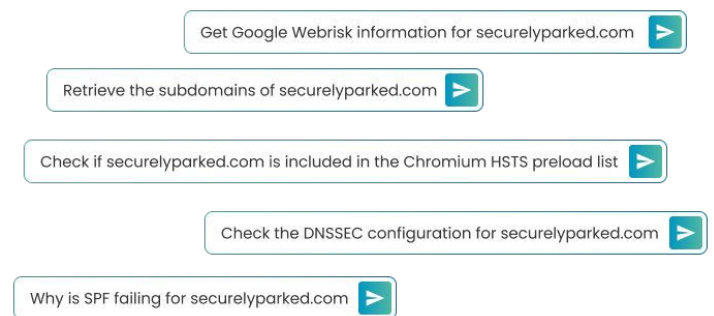

Use AI for proactive defense

Analyze vast amounts of security data to detect exposures, prevent configuration drift, and classify assets or suspicious activity. Provide your users with detailed assessments to support informed, proactive decision-making.

Benefit from consistent, proactive security at scale

Rely on built-in expert playbooks to guide multi-step security analyses with precision, delivering accurate outcomes even in complex scenarios.

“Before using Radar, my workflow was manual and inefficient, and checking a single domain could take up to twenty minutes. With Radar’s quick and comprehensive insights, I can now assess a domain’s security posture and configuration in two minutes.”

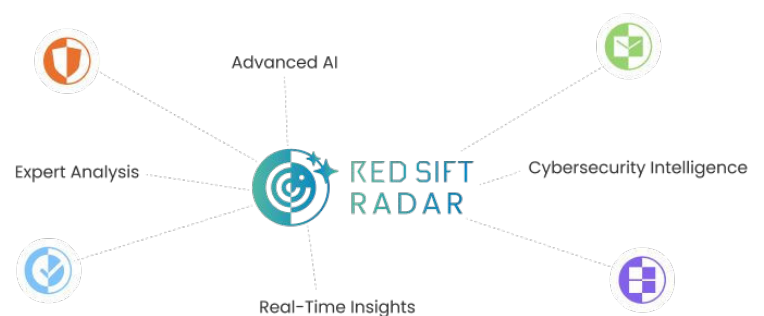

Jose Gomez
IT Director

GENERAL  CATALYST

Integrated with the Red Sift application suite

Easily access Radar from anywhere across the Red Sift platform, allowing you to leverage its powerful insights and tools from where you’re already working.

Why security teams choose Red Sift Radar

Save time

Resolve security issues 10x faster - investigations across emails, domains, and internet-facing assets that used to take 20 minutes can now be completed in just 2.

Improve your security posture

Utilize LLM-driven insights and Radar's contextual understanding to receive tailored guidance on your specific issues—no additional headcount needed.

Streamline workflows

Eliminate manual tasks and data collection by seamlessly integrating deep cybersecurity intelligence into your existing systems.

Upskill faster

Translate complex security tasks into simple, natural language conversations, empowering both technical and non-technical users to quickly master advanced troubleshooting.
